

Report from Village Hall by Councillor Louis Allan

The hall refurbishment project continues to garner interest within the village. Village shop personnel are very enthusiastic and keen to have the project include some expansion of the shop facilities. Action is in hand to amend the plans to include what the shop might desire.

After a somewhat chequered set of experiences with 'Airband,' broadband was finally provided to the hall on Thursday 16 March. This is a robust (355 yd, line of sight) 5G signal from the mast with recorded average speed of 181 Mbps. A Linksys Velop mesh router was provided by 'Airband' which will allow range enhancements if required.
